

Job Description & Job Code SE-AP-IN-03

Title: Senior Software Engineer- Full Stack & Web Technologies

Location: Flexible, periodic physical meetings/work required

We're looking for a highly **skilled and experienced software engineer(s) to join our application practice & technology team**. Our ideal candidate will have **expert** knowledge of **software development** processes and solid experience **testing (automation)** and knowledge of **deploying (CI/CD) applications in cloud**. If building high quality, elegant, beautiful and innovative products motivates you, if you enjoy writing application code, if that is what makes you tick, we'd like to hear from you.

Objectives of this Role

- Contribute to development and **engineering of new/existing products**, deliver mission critical software across **industry** verticals. Work with partners, collaborators and **cross functional, distributed teams in an agile setting**. Involve in **innovation for our products and customers** through participation in ideation, prototyping and validating product fit
- **Visualize, design, and develop creative and innovative software** applications, as we continue to experience dramatic growth in the usage and visibility of our products
- Create **scalable software platforms and applications**, and efficient enterprise solutions that are **unit tested, code reviewed, and enable continuous integration & deployment**, be hands on with a) micro-services architecture, b) software development in cloud, c) software testing automation and cloud deployment.
- **Contribute to architectural decisions and involve in decisions pertaining to technical stack** in collaboration with in-house and external teams and execute projects in alignment with business priorities.

- Examine existing systems, identifying flaws and creating solutions **to improve product quality and enhance monitoring and automated remediation**
- Define, plan and execute full software development life cycle (SDLC) for projects, adhering to company standards and expectations

Daily and Monthly Responsibilities

- Design and **build tools and frameworks** to support product development, **ensure quality** standards, deployment, management and monitoring of the company's services and products
- **Plan and scale distributed software and applications**, applying synchronous and asynchronous design patterns, write code, and deliver in accordance with scope, urgency and quality and challenge assumptions where necessary
- **Collaborate with global team, producing contributing to project work plans and evaluating feasibility of project, estimating work effort**, while leveraging global **technology stack** and making localized improvements
- Work with project/product managers and user experience designers to **influence the strategy for the next wave of product roadmap features** and system capabilities, identifying the best way to deliver agreed plans.
- Demonstrate proactiveness to manage risks. e.g., technical stack, design patterns, code reviews and evangelize s/w best practices
- Give a high level of attention to free of faulty programming, **keep developers** proactively informed without compromising reliability, conduct code reviews and act as a gatekeeper of quality

- **Demonstrate technical subject matter expertise**, take voluntary ownership, responsibilities and contribute to create an environment that reflects **Limendo** values and culture
- Track, **document** where essential, and **maintain software** & system functionality—both internally and externally, leveraging opportunities to **improve engineering productivity**

Good to have

- **Identify and implement** best practices in software engineering, quality assurance and tooling. **Champion** Limendo vision and culture inside and outside the organization.
- **Contribute** to technical articles, blogs, videos and host sessions or in-person, online/live workshops in-house or if necessary, to external audience on select technical topics, discuss industry best practices, emerging tools and technologies, **lead lab/research initiatives and drive PoCs targeted at innovation and creative problem solving.**
- **Mentor resources** - lead by example in all spheres of professional development, groom and develop talent, contribute to talent development efforts, manage learning and development of team members, work directly with senior members and align to business priorities, communicate effectively in all forms of the language, written, spoken and visual.

Skills and Qualifications

- Bachelor's degree in **Computer / Software engineering** or Information Technology & Master's in Engg. Management or professional equivalent
- 5 - 10 years of experience **engineering enterprise software and platforms/ knowledgeable on no-code**

- 5 - 10 years of experience (professional or academic) with **Java, Python or C++/C#/other programming languages**
- Proven ability to document **design processes**, including development, tests, analytics, and troubleshooting
- Experience with rapid development cycles in a **web-based** environment
- Strong **scripting and test automation** abilities
- Experience in **cloud setting is preferred**, AWS, Azure or GCP
- PHP, HTML5, CSS3, JavaScript, AJAX, JSON.
- **Framework and Libraries:** Laravel, Vue.js, jQuery, Angular 2, LESS/SASS, Bootstrap, React, ASP.Net, .Net, Microsoft Technologies ...
- Integrations: **XML, REST, SOAP, WSDL**, ...
- Server & Databases: **MSQL, MySQL, NodeJS Server, PostgreSQL, MongoDB, Firebird, Azure Databases, etc.,**
